Network support services for Microsoft, MAC & Linux platforms

We will architect, implement and manage your network infrastructure so you don't have to. We'll take care of data backup, virus threats, security risks, email problems, server errors and networking issues so you and your employees are free to focus on core business initiatives.

- Network analysis & design
- Remote monitoring and support
- Desktop support
- Server setup and management
- Virtual Private Network (VPN) setup
- Managed support (monthly & on-call)
- Onsite and offsite backups
- After-hours help with moves, server migrations & upgrades

Staff augmentation

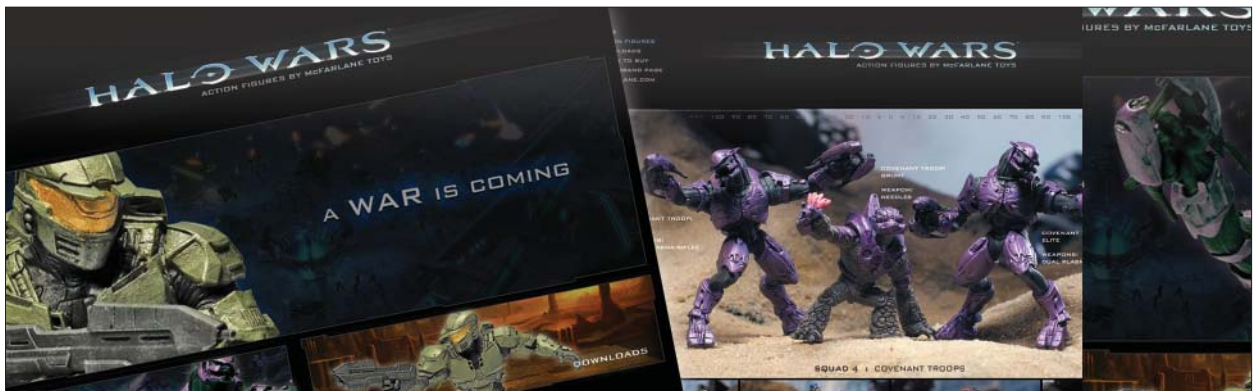

We will augment your existing team with one or more expert marketing and technology resources who will be productive immediately. Our flexible consultative approach includes assignment of multiple resources with varying skills within one resource budget. Short term or long term, onsite or offsite we can provide the professional resources you need including:

- System Architects
- Project Managers & Technical Leads
- Internet Marketing Consultants
- Graphic & Web Designers
- Software Engineers
- Onsite & Offsite Resources
